2.10 写出下列函数的最大项表达式。

$$(1) Y = (A + B)(\overline{A} + \overline{B} + \overline{C})$$

$$(2) Y = A\overline{B} + C$$

$$(3) Y = \overline{A}B\overline{C} + \overline{B}C + A\overline{B}C$$

$$(4) Y = B\overline{C}\overline{D} + C + \overline{A}D$$

$$(5) Y(A, B, C) = \Sigma(m_1, m_2, m_4, m_6, m_7)$$

解：因为全体最小项之和为一（最小项的性质）

又因为 $Y + \overline{Y} = 1$ （基本公式 $A + \overline{A} = 1$ ）所以即可将各函数化为最小项之和的形式。

所以若给定逻辑函数 $Y = \Sigma m_i$ ，则 Σm_i 以外的最小项之和为 $\overline{Y}$ ，即

$$\overline{Y} = \sum_{k \neq i} m_k \text{。故可得 } Y = \overline{\sum_{k \neq i} m_k}$$

利用反演规则，可将上式化为最大项之积的形式 $Y = \prod_{k \neq I} \overline{m_k} = \prod_{k \neq I} M_k$

所以，可先将各函数式化为最小项之和的形式，再化为最大项之积的形式。

$$(1) Y = (A + B)(\overline{A} + \overline{B} + \overline{C})$$

$$Y = (A + B + \overline{C})(A + B + C)(\overline{A} + \overline{B} + \overline{C})$$

$$(3) Y = \overline{A}B\overline{C} + \overline{B}C + A\overline{B}C$$

$$\begin{aligned} Y &= \overline{A}B\overline{C} + \overline{B}C + A\overline{B}C \\ &= \overline{A}B\overline{C} + A\overline{B}C + \overline{A}\overline{B}C \\ &= \Sigma m(1, 2, 5) \\ &= \overline{\Sigma m(0, 3, 4, 6, 7)} \\ &= M_0 \bullet M_3 \bullet M_4 \bullet M_6 \bullet M_7 \\ &= (A + B + C)(A + \overline{B} + \overline{C})(\overline{A} + B + C)(\overline{A} + \overline{B} + C)(\overline{A} + \overline{B} + \overline{C}) \end{aligned}$$

$$(4) Y = B\overline{C}\overline{D} + C + \overline{A}D$$

$$\begin{aligned}
Y &= BC\bar{D} + C + \bar{A}D \\
&= ABC\bar{D} + \bar{A}BC\bar{D} + ABCD + \bar{A}\bar{B}CD + \bar{A}\bar{B}C\bar{D} \\
